

Device Placement

FlashLink NOW Real-Time Loggers

Use the adhesive strips on the back of the shipping card to attach the RTL logger to a box on the last pallet. The RTL logger should be facing the doors and ideally near a door seal for best connectivity.

Optionally, place an "Attention" visibility sticker to bring more notice to the RTL logger so the receiving team at the destination will be able to locate and collect the device.

FlashLink BLE Loggers

Use the adhesive strips on the back of the shipping card to attach the BLE logger to a box on the last pallet. If possible, fold the card over the top of the pallet with the BLE logger on top as this will optimize the readability by BLE Gateways at the arrival destination.

Optionally, place an "Attention" visibility sticker to bring more notice to the BLE logger so the receiving team at the destination will be able to locate and collect the device.
